Exoplanet observations

Planet formation & Astrobiology

ALMA observations

HL Tau: a Class I/II YSO
multiple gaps observed

connection between star & planet formation

Star formation

Planet formation

Astrobiology

A vibrant collage of scientific imagery. In the upper left, a black hole with concentric orange and red rings. In the upper center, a bright, fiery supernova or nebula in shades of orange, yellow, and blue. On the right, a blue and white DNA double helix structure. In the lower left, a brown, cratered planet or moon. In the lower center, a blue and white Earth. In the lower right, various molecular models with red, white, and blue spheres. The background is a deep blue space with stars and nebulae.

Let's have fun with sciences
